HTPA8x8d

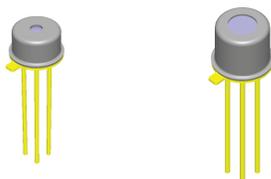

Infrared Thermopile Array Sensors for Remote Temperature Measurement and Imaging Applications

The HTPA8x8d is the world's smallest infrared array sensor with a resolution of 8x8 pixel inside a TO46 housing.

Due to the digital I²C interface only 4 pins are needed. It has a built-in EEPROM to store all calibration data and a 16-bit ADC. The speed can be set internally via the sensor clock and ADC-resolution between 89 Hz (highest resolution) and 160 Hz (lower resolution).

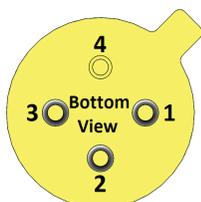

Available Optics

Optic	L0.8 (TO46)	L2.1 (TO46)
